Washrooms by Ideal Standard

Hygiene Redefined

Hygiene is part personal ritual, and part life-saving essential. For more than a century we have worked to understand and refine the practice of hygiene in the washroom setting. Today, more than ever, our superior technology and research are focused on the delivery of intelligent, sustainable and durable solutions for the wellbeing of all.

All you need

From ProSys® and the technology you don't see, to Atelier and the design you do – our commercial washroom collections fit together beautifully to create a total solution.

Reaching across hotel and hospitality, public washrooms and offices, our technology is elegant in design with ideas that simplify maintenance and maximise hygiene. Deep cross-sector experience means you get a detailed specification based on your unique commercial needs and budget. And, by selecting from our award winning portfolio, together we can create a washroom that's certain to deliver an enhanced experience for every user.

Digital design services

Digital construction supports a more efficient process and more intelligent outcomes.

Our in-house team uses industry-leading software to author accurate 3D models of your project. Every one of our washroom products has been intricately recreated as BIM (Building Information Modelling) Objects.

Here for you

Whether your priority is sustainability, ease of maintenance, saving space, iconic design or any combination of those, we'll build a solution from the ground up, together.

At every step of the process, you can expect obsessive attention to detail, precision project management and a guarantee of brilliant service.

As part of this commitment, we share our knowledge with professionals – offering courses on the latest developments in regulations, accessibility, BIM, the importance of brand and hospital infection control.

Washrooms by Ideal Standard

All you need for Hotels & Hospitality

01 All you need for Hotels & Hospitality

The design of hospitality washrooms now rivals that of lobby space when it comes to customer satisfaction and overall brand perception.

For designers, creating a certain ambience, a relaxed space with personal privacy a major consideration, calls for a more diverse colour palette, creative layout – even music and fragrance. And all this while maintaining efficiency of flow and cleaning frequently and quickly so as to maintain a high standard of appearance.

By offering an expansive creative palette in the form of our Atelier Collections, supported by the hidden brilliance of technology like ProSys®, Ideal Standard equips architects and designers with all they need to deliver a value-added washroom experience for their clients.

Insight Hospitality Washrooms

#bathroomselfie and brand experience

Popular online consumer review sites have become important tools for business owners who understand the value of positive rating. The Centre for Hospitality Research found that “higher scores on online travel advisory sites allow hotels to charge up to 11.2% more while maintaining occupancy rates”.

With washroom images and comments featuring frequently on these sites, their design and decoration should form a central part of such businesses’ commercial plans. This extends to social media, where the washroom spaces most often shared and recommended online now feature bolder colours and

patterns or extreme décor, employing tongue-in-cheek style, unusual fixture shapes and “glamour” finishes in taps and toilet pods, as well as ornate mirrors, marquetry and so forth.

Washroom design professionals are the future trendsetters across all commercial sectors and, understanding the impact of social media and marketing, they can tailor projects to maximise positive opportunities for their clients to attract and retain customers.

4/10

People have posted online about a washroom experience at a restaurant, bar or shopping centre.

200 million +

Online reviews posted in a month to just one of the leading online travel sites.

Atelier Collections

The latest collaboration with Palomba Serafini Associati, our Atelier Collections honor Ideal Standard's Italian design heritage, while bringing a completely fresh take on modern living – along with unlimited opportunities to create timeless projects.

With Atelier Collections, designers can create a seamless continuation of a client's overall brand experience in both washrooms and private bedrooms – making an interaction more memorable, creating 'selfie worthy' spaces, all while offering freedom of expression.

New ways to engage

Washrooms that present as the antithesis of bland, neutral spaces – with bolder colours, patterns, ‘glamour finishes’ and even tongue-in-cheek style – are those most often shared and recommended online.

And so Atelier Collections pushes the boundaries of washroom design with choice of colour, too – with the range of Ipalyss® basins designed by Robin Levien and made possible by Ideal Standard’s Diamatec® technology.

Ultra-fine, impossibly light and durable, Ipalyss® brings ten new colours to the traditional white gloss and white silk. Some colours hark back to historical Ideal Standard designs but with a contemporary and elegant finish, while others are entirely new and have been designed to complement popular modern materials, such as marble and stone.

01 White gloss	v1 White Silk	V3 Black Matt
V2 Black Gloss	V5 Slate Grey	V9 Concrete
V4 Kashmir	V8 Mink	V6 Pomegranate
V7 Nude	X8 Powder Blue	X9 Sage

Intelligent brassware

Along with their award-winning design, a choice of height, control and finish, our Joy and Connect Air ranges bring a little hidden brilliance too in the form of FirmaFlow®.

The latest ceramic disc technology, FirmaFlow® regulates temperature, offers greater user control for a smoother experience, and reduces water consumption – essential for meeting sustainability targets.

In addition to a chrome finish, our coloured brassware uses a Physical Vapour Deposition coating. A thin protective coating that is applied in a vacuum and preserves the lustre and vibrancy of the material, PVD technology makes our brassware ten times more resistant to chemicals, wear, impact, discoloration and corrosion.

ProSys®

The technology you don't see
is as important as the design
that you do.

For designers looking to
maximise space, enhance
hygiene and create a certain
aesthetic, our ProSys® range
of compatible installation
systems, flush plates, ceramics
and fittings ensure that every
layer works and fits together.

FAST AND EASY
INSTALLATION

WATER-SAVING
SMARTVALVE

ULTRA STRONG
FRAMES

TOOL FREE
SERVICING

Inside ProSys®

ProSys® high-quality installation systems provide complete peace of mind behind the wall. Advanced features like our EasyFix wall brackets, the incorporated brakes and adjustable outlet bend make our frames extremely easy to install, safe to use and quiet to operate.

Tool-free servicing
It's quick and easy to access the cistern

Corrosion resistant frame
For complete peace of mind behind the wall

Load tested up to 400kg for WC frames
Washbasin frames support up to 150kg, urinal frames up to 100kg

Adjustable outlet bend
Enables an easy and flexible depth adjustment to conveniently fit all waste pipe arrangements

Fast and easy installation
EasyFix brackets allow for fast fixing to the wall and precise levelling of the frame in 3 easy steps

Water-saving SmartValve
All ProSys® cisterns are fitted with a special delayed-fill inlet valve which can save up to 9 litres of water per day. Water only begins to fill the cistern after the flush valve is closed

Fully adaptable service box
Depth is adjustable from 20 to 90mm, which allows the service box to cover all wall thicknesses. The box is made from polypropylene, which is soft and easy to cut

Simple height adjustment from 0-200mm
Brakes on feet make height adjustment a simple, one-man job

ProSys®

Key Features

Our ProSys® pre-wall installation system includes a range of no-touch flush plates which make using washrooms a more hygienic experience. As with everything in this range, there's more to the flush plates than meets the eye.

Self-powered controls

There's no need for an electricity supply or batteries, because SmartForce powers a capacitive control plate by harnessing the power of the flush.

Self-cleaning system

SmartFlush is a self-contained refillable system inside the cistern, which dispenses an exact dose of liquid disinfectant into the toilet with every flush. (SmartFlush is not available on UK products)

Water-saving inlet

Our SmartValve inlet only allows the cistern to refill once the flush is complete. This avoids wasting water during flushing.

Washrooms by Ideal Standard

All you need for Offices

02 All you need for Offices

There is a strong link between the quality of an organisation's washroom, and that of its employees' wellbeing – and in turn, its commercial performance.

And this is not just a matter of hygiene, but also comfort, with nearly three quarters (73%) of end users telling us the quality of their workplace washroom has an effect on their personal comfort at work.*

It all begins with understanding the importance of privacy and personal space in the office washroom – recognising and supporting equality within the workforce by providing a more personal, private space, non-specific to gender. This can mean giving greater consideration to the flow of people, how to position the WC, basin and dryer, or even something as simple as screening in smaller spaces creates a sense of privacy, and supports wellbeing.

Our range of smart, touchless products and systems supports architects and designers in meeting this growing need, enabling you to create washrooms that not only promote physical health, but also leave people feeling better going out than they did coming in.

*Creating Better Washrooms whitepaper, published by Ideal Standard, 2019

Insight

Office washrooms

Meeting higher expectations

With the blurring of business and leisure and changes in how we use office washrooms, designers will be expected to deliver a multi-functional backstage 'microspace' to satisfy modern urbanites, whilst balancing a complex range of regulatory and client requirements.

Despite clear evidence linking even small internal environmental improvements to higher employee satisfaction, design professionals do not seem to capitalise enough on these benefits in their commercial projects.

Design professionals therefore have an opportunity to use more evidence-based knowledge to inform their creative and aesthetic proposals at earlier stages to create more successful, value added washroom projects and benefit employee/tenant satisfaction.

73%

Nearly three quarters of end users believe the quality of their workplace washroom has an effect on their personal comfort and wellbeing at work.

64%

Close to two thirds of end users believe the quality of their workplace washroom has an effect on their job satisfaction.

Washrooms by Ideal Standard

Offices

Introducing Intellimix®

Rising to the challenges of the modern world calls for a new definition of hygiene. What we call total hygiene.

That's the idea behind Intellimix® – a smart touchless tap that dispenses both water and soap – encouraging users to always wash with soap, which the World Health Organisation recommends as the most important measure we can take to avoid the

transmission of harmful germs. Intellimix® doesn't just deliver superior hygiene, though. It also reduces running costs, improves sustainability, and even makes maintenance simple thanks to the Intellimix® app.

TOTALLY
TOUCHLESS

100% SOAP WASHES
IMPROVES HYGIENE

SAVE UP TO 80%
ON SOAP

SAVE UP TO 85%
ON WATER

Hand washing rituals

Offices
Intellimix®

International studies prove that correct hand hygiene reduces the number of people who get sick with illnesses or viruses by over 30%. The same research also shows around 30% of Europeans don't use soap when washing their hands after visiting the toilet.

By ensuring every wash involves soap, Intellimix® redefines individual hygiene, and with it the washroom experience.

Intellimix®

Key Features

Totally Touchless

Intellimix® automatically delivers water and soap when a user puts their hands under the tap. The screen then explains what is happening, and how to follow the wash cycle.

100% Soap Washes

Intellimix® Mild Antibacterial Foam Soap is automatically dispensed as part of the washing cycle.

Save up to 80% on soap

Intellimix® mixes soap with air to create a soft foam that is not only pleasant on the skin, but is also economical. The soap pump that has a tested lifespan of over 500.000 cycles.

Save up to 85% on water

When compared with standard single lever taps, thanks to the 2l/min flow limiter and programmable water flow timing.

Stagnation Protection

A periodic hygiene flush is triggered automatically after a set time, rinsing the pipes to safeguard against bacterial growth.

Ideal Blue

A separate water tube ensures there is no contact between the water and the brass body of the tap – keeping the water nickel and lead free, in line with drinking water regulations.

Washrooms by Ideal Standard

Offices

Introducing Wash troughs

Wash troughs with integrated tap decks or upstands are an adaptable, versatile solution for public spaces which require multiple hand-washing facilities.

With minimalist silhouette and dramatic angles, the trough is both a design feature and space-saving innovation – achieving the maximum washing positions whilst minimising the cleaning required, thanks to reduced edges, corners and surfaces where bacteria can breed.

Washrooms by Ideal Standard

Flexibility for public spaces

Offices
Wash troughs

The flexibility that troughs give is second to none. Mount your chosen trough on a base of your choice to match your business and washroom aesthetic.

A particular design feature that is ideal for public buildings, restaurants and other public spaces where a level of bespoke product choice enables your client to envisage how the product can work within their space.

Wash Troughs

Key features

Streamlined design

Streamlined in shape and with sleek functionality, the washbowl has a dramatic angled gradient that drops down to a hidden waste area.

Water-saving taps

Brassware such as water-saving Sensorflow NEW taps and accessories like integrated soap dispensers save resources and support greater hygiene in busy areas.

Bacteria resistant surface

The surface of every trough in our range is completely non-porous, meaning potentially harmful bacteria are prevented from being absorbed into the material. 5 year guarantee on all trough choices.

Easy to maintain

Wastes can be accessed from the top of the trough so blockages can be quickly addressed without having to gain access from underneath or behind.

Washrooms by Ideal Standard

All you need for Public Washrooms

03 All you need for Public Washrooms

The washroom experience is no less important in public spaces than it is in hospitality or office settings, however it brings with it complex challenges of human behaviour, sustainability, and budget.

Designers are tasked with understanding and planning for the impact of evolving patterns of modern behaviour on efficiency of space and flow – such as queuing outside, or inside for the WC or dryer, along with movement of people through facilities. In addition, societal needs like family rooms or accessible solutions for individuals in need of accompaniment or assistance need to be considered.

Above all, though, is hygiene. From handsfree, touchfree, sensor-driven flushing, to delivery of soap and water to the opening and closing of exterior doors – or even the total removal of exterior doors.

Attuned to the patterns of modern living, our portfolio is full of practical washroom solutions that don't compromise on design. Products that deliver reliability, high performance and ease of maintenance – giving you the tools you need to create a space that always feels clean, comfortable and safe. A place that works for everyone, every time.

Insight Public Washrooms

Make it hygienic, accessible and then sustainable

Both the end-user and design professionals prioritise quality of provision over an adherence to equality. Regardless of what the signage above the door depicts (or how evenly distributed the floor space), if the facility is inaccessible, ill-equipped, unclean, or – at worse – unsafe, it serves nobody, irrespective of their needs, gender or beliefs.

However, different genders do have specific needs and expectations of washrooms, and design professionals must be aware of these when considering design and allocation of space

within the washroom itself and in other facilities, such as showers. The provision of gender-neutral versus gender-specific washrooms will likely remain a relevant topic. Sustainability will also remain one of the biggest concerns for the construction industry in upcoming years, becoming even more important as cities adopt more greening policies and methods for assessing the sustainability of buildings, such as BREEAM, continue to increase in implementation across the continent.

—
SOURCE:
Creating Better Washrooms
whitepaper, published by
Ideal Standard, 2019

2/3

Two thirds of end users think sustainability is extremely or very important, yet it is not in their top 10, which includes more practical factors such as cleanliness, hygiene and ventilation.

34%

Over a third of design professionals surveyed thought that accessibility would be a big influence on commercial washroom design in the next five years.

Introducing Sphero®

Flushing toilets, urinals and washing activities contribute to the majority of freshwater use in all buildings.

With our Sphero® collection, designers can build-in long term resource efficiency, along with greater washroom hygiene and timeless design.

HYBRID FLUSH
SAVES WATER & ENERGY

APP COMPATIBILITY
FOR EASY MAINTENANCE

SMART SENSOR PREDICTS
& PREVENTS PROBLEMS

RIMLESS DESIGN
FOR EASY CLEANING

The world's only smart urinal

Designed in partnership with the award-winning Studio Levien, Sphero® brings together the latest water-saving innovations with timeless aesthetics. A combination of greater washroom hygiene and reduced water consumption, this is an advanced urinal that's easy to install and maintain.

Hinge bracket

The bracket swings out while the ceramic stays retained to the wall and kept off the floor. Offering easy and hygienic maintenance.

Wall mounted installation template

The rubber seal protects the ceramics and wall and removes the need for silicone sealant, allowing for quick and easy installation.

Sensor technology

Attached directly to the pipe, the sensor is positioned 45 degrees under the waste trap to optimise urine detection and the direction of waste pipe blockages. When a blockage is identified the flush is deactivated to prevent flooding and a maintenance alert is triggered.

Washrooms by Ideal Standard

Sphero®

Key Features

Size options

Mini, midi, maxi – three sizes and a host of options for specifiers and building managers to work with. The multiple features, from waterless to smart monitoring, makes Sphero® the right choice for busy public washrooms.

Enhanced hygiene

Sphero's anti-splash geometry prevents splash-back onto the floor and clothing. The rimless design makes it easier to clean, and the spreader delivers a flush that cleans a greater surface area.

Save 50,000 litres per year

Sphero's smart sensors know when to flush, reducing water usage. Stadium mode, with reactive flushing, can save up to 50,000L of water per year.

Mobile monitoring

Sphero's mobile app means you can check sensor status, power, flow issues, cartridge life and usage statistics from your phone – monitoring all urinals simultaneously

Public Washrooms
Sphero®

Simple maintenance

A template and bracket means Sphero® is easy to fit and requires no sealant, and can be maintained without being removed from the wall. The shrouded design also means added security in public washrooms.

Introducing Sensorflow NEW

Upgrade to touchless quickly and easily with Sensorflow NEW, a range designed for quick renovation.

The Sensorflow NEW tap will fit in the existing tap hole and the integrated battery and solenoid valve means Sensorflow NEW can be easily fitted into any washroom, even without an electricity connection.

The result is a long-lasting brass tap that combines innovative sensor technology with reliability and ease – making touchless a possibility for any project.

EASYFIX® TECHNOLOGY
MAKES UPGRADES

Inside Sensorflow NEW

Public Washrooms Sensorflow NEW

Sensorflow NEW is ideal for busy commercial settings. It's compact, it saves water and it's totally vandal resistant – which means your washrooms can be used by thousands of people every day and guarantee a pleasant, hygienic experience for every one.

And for environments where multiple handwashing facilities are needed, Sensorflow NEW taps can be electronically joined together in a run of up to six fittings. Once the first fitting has been linked to the Sensorflow NEW transformer, subsequent fittings only need to be linked to the preceding fitting. Each fitting will still work independently from its own sensor via a solenoid.

Sensorflow NEW

Key Features

100% touchless

'No touch' operation improves the hygiene of the washroom.

Sustainable choice

The 3.7 litre per minute flow regulator controls water release and saves resources.

Anti-vandal design

No moving external parts reduces the chances of vandalism.

Versatile choice

Wall and deck mounted, with power supplied by mains or battery.

Prevents bacteria growth

Optimised waterway keeps internal water volume low, and optional automatic flush rinses the pipes.

EasyFix technology

Pre-assembled components cut installation time by up to 30%, keeping set up costs to a minimum.

Easy to maintain

Cleaning is quick and easy thanks to a streamline, cylindrical design. Servicing can be done through the front or top, using standard ISI service parts.

- Water saving smart valve (delay fill).
- Easy adjustment to low water volume.
- Class 1.

Flushplate
Oleas M2 Mechanical Dual
Flushplate – Chrome

- Designed to complement our ProSys® WC frames.
- Available in 4 finish options – white, chrome, brushed chrome and black.
- Mechanical actuation.
- Water saving flush.

WC
Blend Cube
Wall Hung

- Every angle of Blend has been carefully considered to deliver absolute design purity.
- Aquablade flush technology.
- Water efficient.
- Available in white or silk white finish.
- Designed by Palomba Serafini Associati.

WC
Blend Cube
Seat and Cover

- Slow close.
- Quick release for easy clean and replace.

Basin
Ipalyss
60cm Oval Vessel

- Striking Pomegranate colour creating a memorable customer experience.
- Ultra thin ceramics.
- Using Diamentic technology to be very strong and suitable for commercial use.
- Integrated overflow options.
- Includes freeflow waste and colour matched ceramic cover.
- Ceramic Design By Studio Levien.
- Colour design by Palomba Serafini Associati.
